

# DOWNLOAD HELPER

Peter Bilodeau, SWLSB RECIT

**Download Helper** allows you to download many, if not most, videos on the Internet, permitting them to be run locally from your computer without Internet connection.

Download Helper must be used in conjunction with the Mozilla Firefox web browser.

Download Helper is an excellent program, perhaps the best of its genre available today; however, it does allow connection to questionable websites.

To eliminate the possibility of access to these sites and their removal from Download Helper, point your browser to

<http://www.downloadhelper.net/amo-install-safe.php>

Follow the instructions on the screen and proceed from there.

If you have already installed Download Helper and wish to remove the questionable content, point your browser to

<http://www.downloadhelper.net/safe-mode.php>

Activate safe mode

In the middle of the page, notice the green button reading “**Activate Safe Mode**”. Click that button to eliminate all adult content from the add-on.

To install normally, follow the procedure below:

Point your browser to

<http://www.downloadhelper.net/>

Click **Install** along the navigation bar.

In the subsequent screen, click “**Add to Firefox**”, followed by “**Install Now**” in the next panel.
